Dr. Raymond R. Green
Heber City, Utah

Dear Ray:

On May 9th, 1963, we took Mrs. Lavada Harrison to the Utah Valley Hospital and did an open reduction on the fractures of the facial bones. This was rather a severe procedure inasmuch as there had been several days since the accident and there was some difficulty in getting the bones into correct position, however, good results was obtained. At this writing she is doing very nicely and the bones were stabilized in their normal relationship and she is recovering normally.

I appreciate sincerely your sending Mrs. Harrison in for treatment and we are in hopes that her recovery will be progressive. Enclosed is a copy of Dr. Matheson's report from the X-ray department of the Utah Valley Hospital.

Very truly yours,

Da Costa
